ÜRETİM

DENIZ, cerrahi el aletleri imalatında paslanmaz çelik ve titanyum malzeme kullanmaktadır.

Paslanmaz çelik yapısında bir çok element bulunmakta olup bunlardan en önemlileri karbon ve krom'dur. Paslanmaz çeliğin kalitesini ve kullanım alanını belirleyen bileşimindeki karbon krom dengesidir. Paslanmaz çeliğin yapısında krom oranı ne kadar yüksek ise çelik paslanmaya o kadar dirençli olur. Yüksek karbon oranı çeliğin sertliğini arttırır ama paslanmaya karşı olan direncini azaltır.

Titanyum cerrahi el aletleri sahip olduğu üstün özellikler sayesinde cerrahlarımıza bir çok avantaj sağlamaktadır. Titanyum doğası gereği çok hafiftir. Titanyum içerisinde karbon elementi bulundurmadığından kesinlikle paslanmaz.

Exclusive Collection olarak gruplandırdığımız cerrahi el aletleri Alüminyum Titanyum Nitrür (AlTiN) kaplamalı olup siyah renktedir. Alüminyum Titanyum Nitrür (AlTiN), Titanyum Nitrürden geliştirilmiş ince bir film kaplama olup Seramik olarak bilinmektedir. Aşınmaya karşı son derece dirençli olan seramik kaplamalar, uzun vadeli kesme kenarı keskinliği sağlar, ayrıca karbür ve kromdan daha sert olup yüzey sertliği Rockwell-C ölçeği ile ölçülemeyecek kadar yüksektir.

Bütün DENIZ cerrahi el aletleri Fiber Lazer Teknolojisi ile markalanmış olup silinmesi mümkün değildir. 2-D Matriks Barkod Sistemi bütün aletlerimiz üzerinde bulunmaktadır.

DAHA İYİ BİR YAŞAM KALİTESİ İÇİN EN İYİ MALZEMELERİ KULLANIYORUZ

Herkes sağlık ve hareketlilik içeren dolu dolu bir hayat yaşamak ister.
Bu nedenle üretim operasyonlarımızda en kaliteli telleri, çubukları, profilleri, levhaları ve şeritleri kullanmaya odaklanıyoruz. Bizi motive eden hedef, insanların yaşam kalitelerini yeniden kazanabilmeleridir.

PRODUCTION

DENIZ uses stainless steel and titanium materials in the production of surgical instruments.

There are many elements in the stainless steel structure
but the most important of them is Carbon and Chromium. The equilibrium of carbon and chromium in the composition determines the quality of the stainless steel and usage area. The higher chromium ratio the more corrosion resistant that stainless steel has. The higher carbon ratio increases the hardness but reduces the resistance against corrosion.

Titanium surgical instruments with its superior features possessed provides surgeons with many advantages. Titanium is inherently very light in weight. Since there is no carbon element in the structure titanium is definitely stainless. The higher hardness of the material provides with the longer lifetime of the instruments.

Surgical instruments that we group as Exclusive Collection
Aluminum Titanium Nitride (AlTiN) coated and black in color. Aluminum Titanium Nitride (AlTiN) is a thin film coating developed from Titanium Nitride and known as Ceramic. Ceramic coatings that are extremely resistant to abrasion,Provides long-term cutting edge sharpness, is also harder than carbide and chromium the surface hardness is too high to be measured with the Rockwell-C scale.

All DENIZ instruments are marked with Fiber Laser Technology and it is impossible to remove that marking. 2-D Matrix Barcode System is avaible for our all instruments.

WE USE BEST MATERIALS FOR A BETTER QUALITY OF LIFE

Everyone wants to live a full life that includes health and mobility.
That is why we focus on using the best quality wires, bars, profiles, sheets, and strips in our manufacturing operations. The goal that is what drives us is that people can regain quality of life.

GARANTİ

DENIZ, cerrahi el aletleri
işçilik hatalarına
malzeme içerisindeki bozukluklara
paslanmaya karşı
5 (BEŞ) yıl garantilidir.

Her hangi bir DENIZ ürünün arızalanması durumunda
garantimiz altında onarılacak veya yenisi ile değiştirilecektir.

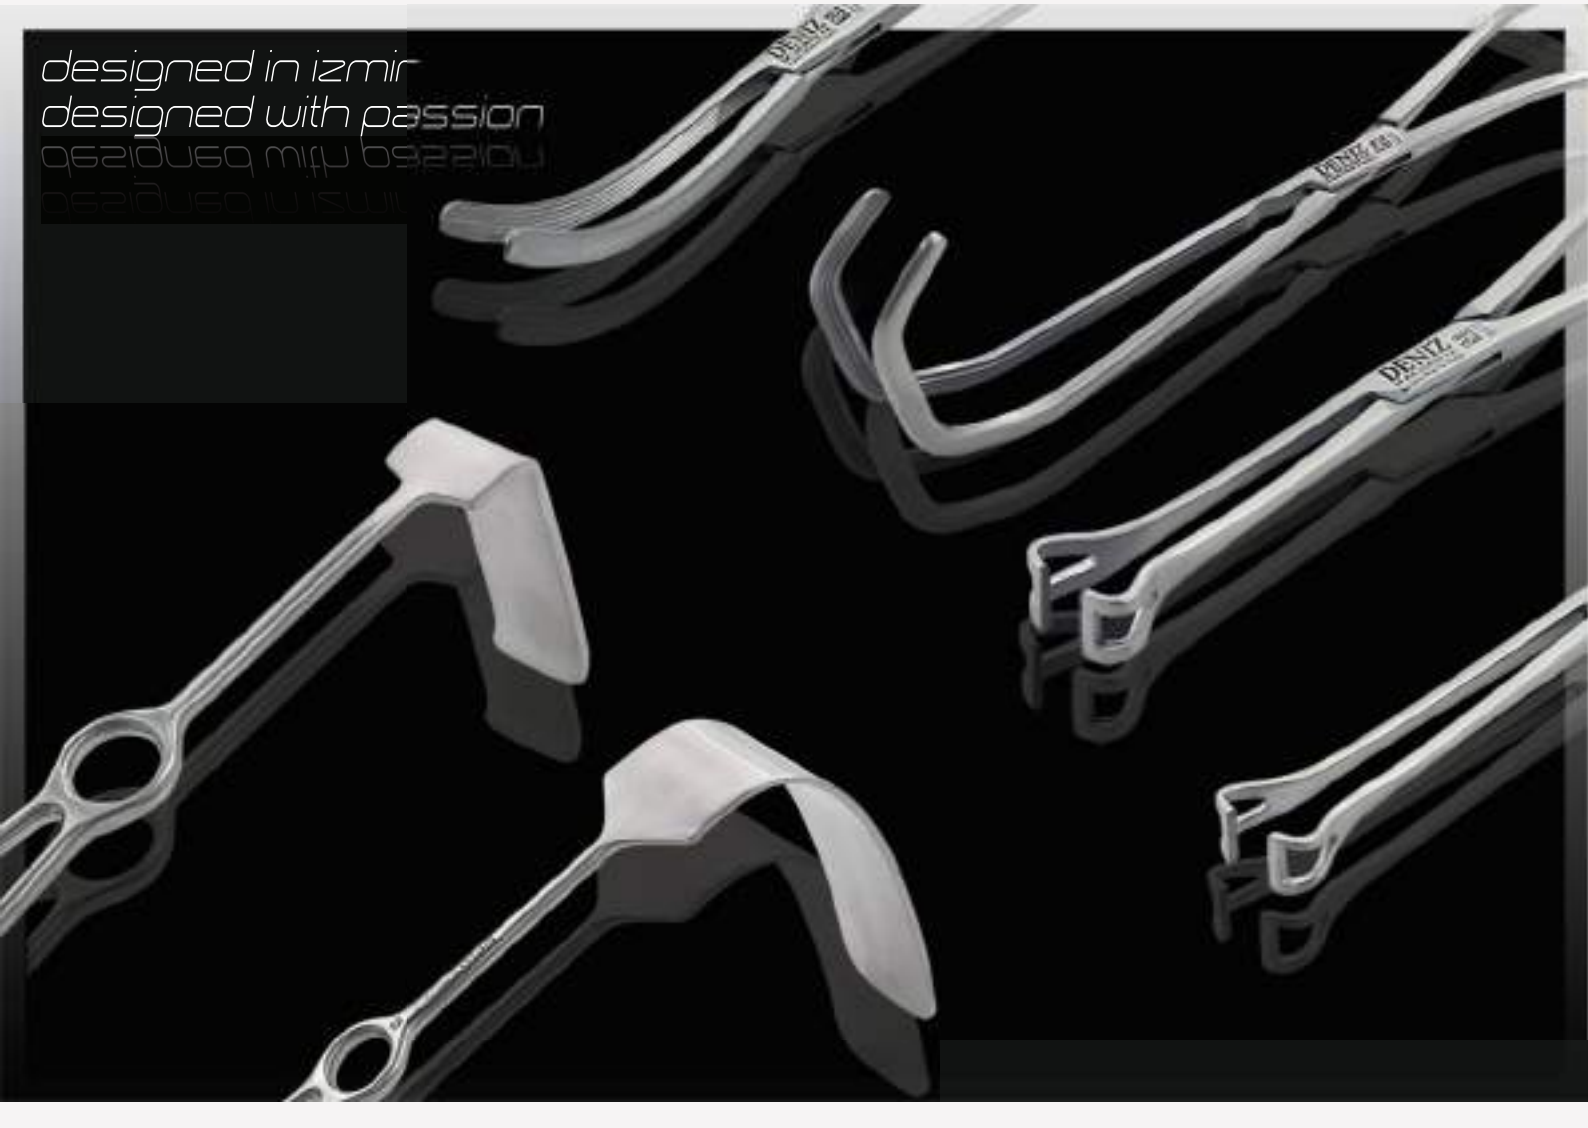

Amacı dışında kullanılmış, uygun şekilde bakımları yapılmamış veya tasarlanmış kapasitesinin üzerinde zorlanmış aletler bu garanti kapsamında olmayacaktır.

Sorumluluğumuz, hizmet ettiğimiz Sağlık Profesyonellerinin sınırsız kullanıcı memnuniyeti sağlanana kadar devam edecektir.

CERRAHİ ALET TASARIMI

Cerrahi Aletler yalnızca kullanımları konusunda
eğitimli profesyoneller tarafından kullanılmalıdır. Aletler genellikle işlevine göre adlandırılır ve
aynı zamanda onu tasarlayan cerrahın adını da taşıyabilir. Bazen, aletler üzerinde, örnek olarak dişleri daha ince
yapmak gibi, modern değişiklikler yapılabilir. Modern cerrahinin taleplerini karşılamak için
sürekli olarak yeni tasarımlar geliştirilirken, birçok aletin isimleri ve tasarımları
yüz yıldan fazla bir süredir değişmeden kalmıştır.

corrosion
for 5 (FIVE) years.

Any DENIZ instrument that is defective will be repaired or replaced at our discretion.

Instruments not properly cared for, used for unintended purposes, or beyond their designed capacity will not be covered under this guarantee. Our liability under this guarantee is limited to the repair or replacement of the defective merchandise.

SURGICAL INSTRUMENT DESIGN

Instruments should only be handled by professionals who trained in their use.
An instrument is generally named according to its function and may also carry the name of the person, generally a surgeon who originally designed it. Sometimes, a modern modification is made to an established instrument, such as making the teeth finer. Whilst new designs are being developed constantly to meet the demands of modern surgery, the names and designs of many instruments have remained unchanged for over a hundred years or more.

CERRAHİ ALET BAKIMI

Uygun özelliklerde titizlikle üretilmiş olan DENIZ cerrahi el aletleri amacına uygun kullanılması ve gerekli bakımların düzgün yapılmasıyla uzun yıllar kullanılabilir.

Aletlerin bakım programının düzenli yapılması bakım maliyetlerini düşürmekle beraber aletlerin kullanım ömürlerini uzatmaktadır. Cerrahi aletlerin düzgün korunması için lütfen aşağıdaki bilgileri okuyunuz.

- Yeni cerrahi aletleri ilk sterilizasyon öncesinde yıkayınız.
- Çamaşır suyu, tuzlu su çözeltisi, kan ve doku kalıntıları gibi alete zarar verecek maddeler yıkama sonrasında sterilizasyon öncesinde alet üzerinde kalmamalıdır.
- Aletleri temizlemek için her zaman distile su kullanılmalıdır.
- Aletleri temizlemek için tuzlu su çözeltisi asla kullanmayınız.
- Sterilizasyon esnasında oluşabilecek korozyon bulaşmasını önlemek için sterilizasyon öncesinde deforme olmuş ürünleri ayırınız.
- Sterilizasyon esnasında oluşan basıncın aletlere zarar vermemesi için kilitlenebilen aletlerin kilitlerinin açık olduğuna dikkat ediniz.
- Suda çözülebilir yağlayıcılar ile aletlerin kilit ve mafsal yerlerini düzenli aralıklar ile yağlayınız.
- Hassas uçlu aletlerin uçlarını koruyucu malzeme ile koruma altına alınız.
- Cerrahi el aletlerini kullanım alanı dışında kesinlikle kullanmayınız. Her zaman üreticinizin tavsiyelerini dikkate alınız.

INSTRUMENT CARE

Designed and crafted to exacting specifications, surgical instruments will perform for a number of years, provided they are maintained correctly and used for their intended purpose. A strict maintenance schedule will help reduce the need for premature replacements, thus cutting costs. For proper safeguarding of surgical instruments, please read and share the following information.

- Wash brand new instruments prior to the first sterilization.
- Remove saline solution, bleach, blood and tissue from instruments quickly and thoroughly.
- Always use distilled water for cleaning instruments.
- Never use saline solution for cleaning instruments.
- Prevent cross-corrosion by separating corroded instruments from other instruments.
- Always autoclave instruments with box lock open to alleviate pressure at the joint and to prevent fracture.
- Lubricate joint and box lock after cleaning with an anti-microbial, water soluble lubricant.
- Protect the tips of delicate instruments with protective covers.
- Never use an instrument for anything other than its intended use. Always follow your manufacturer's recommendations.

Yeni Aletlerin Kullanıma Hazırlanması ve Kontrol Edilmesi

İlk sterilizasyon öncesi yeni aletler temizlenmelidir. Özellikle keskiler, törpüler veya mikro cerrahi aletler için koruyucu kapaklar ve filmler tamamen çıkarılmalıdır.

Preparing The New Instruments For Use and Checking Instruments

Brand new instruments must be cleaned before the first sterilization. Protective caps and protective films must be removed completely, especially for chisels, raspatories or microsurgical instruments.

Cerrahi Aletler

Alet yüzeyini görsel olarak inceleyin. Yüzey temiz, pürüzsüz ve çatlaklardan, pürüzlü noktalardan ve lekelerden arındırılmış olmalıdır.

Makaslar

■ Makasın keskinliğini ve uygun hizalamasını test etmek için, makas bıçaklarının distal üçte ikisini kullanarak bir kesim yapın. Makas ucuna kadar kesilmeli ve kesi sürüklenmeden pürüzsüz olmalıdır.

■ Makası açın. Makasın alt halkasını tutarak üst halkayı bırakın. Bıçakların distal uçları 1/2 ila 1/3 açık kalmalıdır. Bıçak tamamen kapanırsa, makas çok gevşektir. Yarısından daha az kapanırsa, makas çok sıkıdır.

Portegüler

■ Kapalıyken ve iğne tutarken çeneler birbirine değmelidir. Kilitleri birbirine geçmemesi durumunda, bir dikiş iğnesi tutulurken çenelere aşırı basınç uygulanacaktır. Bu durum metal yorgunluğuna ve gerilim çatlağı arızasına neden olabilir.

■ İğne tutucuyu ışığa doğru tutun. Çeneler kapalı ve birbirine değecek şekilde çentiklerin arasından ışık görmemelisiniz.

■ Çeneleri bir parça ince folyo üzerine kapatın. Boşluk veya delik olmayan, eşit bir "ağ" deseni görmelisiniz.

■ İğne tutucusu her pozisyonda kolay ve eşit hareket edebilmelidir.

Ultimate Collection Tungsten Karbür Aletler

Tungsten karbür uçlarda cerrahi kalıntıların birikmesine neden olabilecek herhangi bir açıklık veya boşluk olmamalıdır. Tungsten karbür birleşim alanı pürüzsüz olmalıdır.

Hemostatik ve Kardiyovasküler Klempler

■ Standart bir hemostatik klempi kapatın. Çeneler ilk kilitde değmelidir; ek olarak, son kilite kadar kapatılırken çeneler daha sıkı kapanmalıdır.

■ Vasküler klemplerin, cerrahın hassas kontrollü kapanmayı sağlayabilmesi için, diğer aletlere göre daha fazla kilite ihtiyacı vardır. Uygun şekilde ayarlanmış bir klemp, alet orta kilite kadar kapatıldığında distal uçların birbirine değmesini sağlamalıdır.

■ Enstrüman, kilitlendiğinde ve kilidi açıldığında cerraha esnek bir his vermelidir. Üst yüzük kısmını tutun ve alt yüzük kısmını bırakın. Klempin bacakları serbestçe sallanmamalı, ancak minimum çabayla hareket etmelidir.

■ Mafsalları kontrol etmek ve mafsallarda laçkalaşma olmadığını doğrulamak önemlidir. Bu, özellikle uzun kardiyovasküler klemplerde önemlidir, çünkü mafsalda küçük bir hareket, çenenin ucunda önemli ölçüde daha fazla hareket haline gelir. Bu hareket nedeniyle, çenelerin hizalanmasındaki dişlerin uygunsuz şekilde birbirine geçmesine ve hassas damarların potansiyel olarak yırtılmasına neden olabilir.

Ronjurlar ve Kerrisonlar

■ Düzgün bir şekilde keskinleştirilmiş bir Kerrison, bir kartviziti temiz bir şekilde kesmeli veya eşit bir girinti bırakmalıdır. Kartvizitlerin çeşitliliği ve bunların yapımında kullanılan malzemeler nedeniyle kalınlıklar değişebilir. Kalın bir kartvizit kullanırken, temiz bir kesim elde edilemeyebilir. Düzgün bir kesim, keskin bir alet olduğunu gösterir.

■ Kerrison elçeklerini sıkıştırın. Hareket, sürtünme veya takılma olmadan pürüzsüz olmalıdır. Kapatıldığında, hareketli şaft kesme tabanına temas etmeli, yukarı kalkmamalı ve kesme tabanında uygun kesme baskısını oluşturmalıdır.

■ Kerrison kolu serbest bırakıldığında hızla geri dönmelidir. Alet geri dönmezse, aletin uygun şekilde temizlendiğinden ve yağlandığından emin olmak için kontrol edin.

■ Kapalı pozisyonda Kerrison'u ışığa doğru tutun. Cihazın çeneleri, düzgün çalışmasını sağlamak için tam olarak birleşmelidir (çenelerden ışık geçmemelidir).

■ Intervertebral disk ronjurları bir saç telini sıkıca kavramalı ve temiz bir şekilde kesmelidir. Doğru kesme hizalamasını sağlamak için çeneler tam olarak birleşmeli ve çenelerin içinden her zaman keskinleştirilmelidir.

Surgical Instruments

Visually inspect the instrument surface. The surface should be clean, smooth and free from crevices, rough spots, staining.

Scissors

■ To test the sharpness and proper alignment of scissors, make a cut using the distal two thirds of scissor blades. The scissors should cut to the tip and the cut should be smooth with no drag.

■ Open the scissors. Holding onto the bottom ring of the scissors, drop the top ring. The distal tips of the blades should remain 1/2 to 1/3 open. If the blade closes completely, the scissors are too loose. If it closes less than halfway, the scissors are too tight.

Needle Holders

■ The jaws should touch when closed and holding a needle. If the ratchets do not engage, excessive pressure will be placed on the jaws when grasping a suture needle. This condition could lead to metal fatigue and stress crack failure.

■ Hold the needle holder up to the light. You should not see light through the serrations, with the jaws closed and touching.

■ Close the jaws on a piece of thin foil. You should see an even "mesh" pattern, with no gaps or pinholes.

■ The needle holder should have easy, even movement at every position.

Ultimate Collection Tungsten Carbide Instruments

Tungsten carbide inserts should not have any gaps or holes in the solder that could collect surgical debris that might lead to corrosion and pitting. The insert seam should be smooth.

Hemostatic and Cardiovascular Clamps

■ Close a standard hemostatic clamp. The jaws should touch on the first ratchet; in addition, the jaws should close tighter as the clamp is being closed on the last ratchet.

■ Vascular clamps need more ratchets than other instruments in order to allow the surgeon precise controlled occlusion. A properly adjusted clamp should have the distal tips touching when the instrument is closed to the middle ratchet.

■ The instrument should have a flexible feel to surgeon when being locked and unlocked. Hold onto the top ring handle and drop the bottom ring. The handle should not swing freely, but move with minimal effort.

■ It is important to check the box lock and verify that there is no "slacking" in the box lock. This is especially critical on long cardiovascular clamps because a little movement in the box lock becomes significantly more movement at the tip of the jaw. This could lead to improper meshing of the teeth and potential tearing of delicate vessels because of the movement in the alignment of the jaws.

Rongeurs and Kerrisons

■ A properly sharpened Kerrison should cut a business card cleanly or leave an even indentation. Due to the variety of business cards and the materials used in making them, the thickness may vary. When using a thick business card, a clean cut may not be achieved and an even indentation will indicate a sharp instrument.

■ Squeeze the Kerrison handle closed. The action should be smooth with no grinding or catching. When closed, the moving shaft should touch the foot plate, not go up, causing stress to the foot plate.

■ The Kerrison handle should spring back quickly when released. If the instrument does not spring back, check to make sure the instrument has been properly cleaned and lubricated.

■ Hold the Kerrison up to the light in the closed position. The jaws of the instrument should meet precisely to assure proper function (no light should shine through the jaws).

■ Intervertebral disc rongeurs should grasp a hair firmly and cut it cleanly. The jaws should meet precisely and should always be sharpened from the inside of the jaws to maintain proper cutting alignment.

Çift katmanlı kıkırdak nakilleri birbiri ile tam olarak dikilebilir. Aiach klemp nakil sırasında kıkırdağı diğer kıkırdak boyunca sabitler ve kaymasını önler.
Double-layered cartilage transplants can be precisely sutured with one another. Aiach clamp fixes the transplant against the other along its entire length and prevents slipping.

Çalışması :
Arzu edilen (ihtiyaç duyulan) vakum miktarı ayarlama vidası ile sürekli olarak istenilen değere ayarlanabilir. Vakum oluştuğunda bu vakumun emme kafalarına uygulanması için hızlı-kesme düğmesinin sağa veya sola basılması ile sağlanır. Ayarlanan vakum değeri vakum ayar vidası ile değiştirilebilir. Emme işleminin aniden durdurulması isteniyorsa hızlı-kesme düğmesi kapatılır. Böylece emme kafasına gelen vakum kesilmiş ve emme kavanozuna akış durdurulmuş olur.

Function:
The vacuum required can be constantly preset by the adjusting screw. This vacuum exists then up to the closed quick-shutter, thus the vacuum in the suction head is pressed from the left to the right, the nounted suction head is immediately put under the preset vacuum. In case the preset vacuum has to be changed, this can be done with the adjusting screw. For immediate removal of the suction head simply close the quickshutter, thus the vacuum in the suction head is eliminated at once whereas the vacuum in the suction jar remains unchanged.

Dokular koagülasyon esnasında bipolar forseplerin uçlarına yapışır. Bipolar forsep geri çekildiğinde pıhtılaşmış doku tekrar yırtılır ve sonuç yinelenen kanamadır. Bu istenmeyen sonuca karşı alınabilecek en doğru önlem DENIZ non Stick bipolar forseplerinin kullanılmasıdır. Paslanmaz çelik malzemenin en temel özelliklerinden birisi parlatıldığında mükemmel ısı iletkenliği sunmasıdır. Bu özellik sayesinde koagülasyon esnasında oluşan ısı uçlardan hızlı ve etkili bir şekilde tahliye edilir. Sonuç mükemmel doku koagülasyonudur. Non-stick etkisi, bipolar forseplerimizin uçlarında kaplama bulunmaması sayesinde, kalıcı ve uzun ömürlüdür. Özetle:

- ✓ Ultra parlatılmış hassas uç yapısı
- ✓ Mükemmel ısı iletkenliği
- ✓ Uçlardan hızlı ve etkili bir şekilde ısı tahliyesi
- ✓ Uzun ömürlü ve kalıcı yapışmazlık etkisi

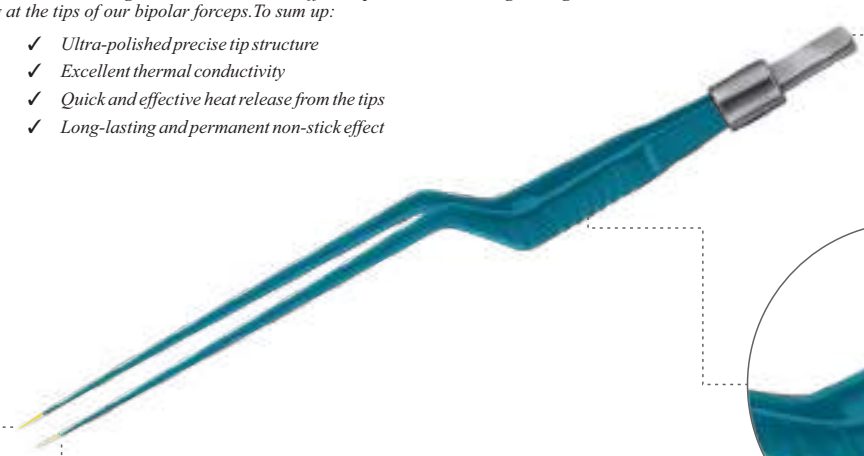

During coagulation tissues tend to stick to the tips of bipolar forceps. When bipolar forceps are pulled back , the coagulated tissue torn apart again the result re-bleeding. The best measure that can be taken against this undesirable result is the use of DENIZ non Stick bipolar forceps. One of the most basic properties of stainless steel material is that it offers excellent thermal conductivity when polished. Thanks to this feature, the heat generated during coagulation is quickly and effectively evacuated from the tips. The result is excellent tissue coagulation. The non-stick effect is permanent and long-lasting since there is no coating at the tips of our bipolar forceps.To sum up:

- ✓ *Ultra-polished precise tip structure*
- ✓ *Excellent thermal conductivity*
- ✓ *Quick and effective heat release from the tips*
- ✓ *Long-lasting and permanent non-stick effect*

Güvenlik
